Data Collection Chart

create your own eden

This chart can be used by students, key teachers and the caretaker to record what is being put into the school compost system. Use it to make regular notes and observations during the composting process.

This chart will enable you to track over time the success of your system and to discover the cause of any problems that might occur (due to over-feeding or changes in pH or temperature).

Date	Type of organic matter added	Amount added	Additives: Water Lime	Notes: Temperature, pH, sights and smells
